Dedicated software developer with a strong passion of coding, problem-solving, and continuous learning. Passionate about contributing to meaningful projects and gaining hands-on experience to grow as a software engineer.

EDUCATION

BTech, The LNM Institute of Information Technology (LNMIIT)
CGPA: 8.09 / 10

2020 - 2024
Jaipur, India

SKILLS

Frontend	JavaScript, TypeScript, React.js, Redux, Zustand, Three.js
Backend	Golang, Echo(Go), Python, Fastapi, SQLite, SQL
Cloud & DevOps	AWS, Docker, Jenkins, GitHub Actions
Fundamentals	Data Structures & Algorithms, OOP, Networking, System Design

WORK EXPERIENCE

Software Developer

EagleView

Jan 2024 — Present

Bangalore, India

- Engineered GIS Layer Override Styling system with React, Redux Toolkit Golang, reducing manual configuration effort by 40%.
- Developed a User Layer management module with full CRUD functionality and support for GeoJSON, KML, and CSV import-export.
- Enhanced app performance by 60–70% through virtual scrolling implementation, optimizing the loading experience for 1,000+ GIS layers and minimizing DOM overhead.
- Developed a QC Dashboard to visualize and manage CSV-based county data on a MapLibre map, enabling roof property analysis and in-place edits to eliminate junk data and ensure dataset accuracy.
- Resolved critical production issues with cross-functional teams, maintaining SLA compliance.
- Contributed to developing an interactive 3D roof facet visualization module using Three.js and React, displaying real-time roof and facet data while enabling dynamic UI theme updates through facet toggling and user interactions.
- Worked on automated backup and restoration process for RDS and S3, ensuring scheduled, reliable data backups and a streamlined recovery process to maintain data integrity and business continuity.
- Developed the complete UI for the Single Property Insight MCP, retrieving comprehensive roof property data from an S3 bucket and presenting it through dynamic charts and graphs, while enabling real-time property interaction on an interactive MapLibre map.

PROJECTS

File Deduplication Platform

React.js, TypeScript, FastAPI, SQLite

GitHub

- Built a full-stack web application to detect and eliminate duplicate files, achieving up to 90% storage savings.
- Implemented MD5 hash-based duplicate detection with a reference-based storage system to maintain a single physical copy of files.
- Developed an analytics dashboard displaying total files, unique files, duplicates, and storage saved.
- Added advanced search, filtering, and full file operations including upload, download, and delete with visual indicators.

Ticket Management System – (ongoing)

React, Next.js, Golang, GORM, Postgress

- Built a scalable full-stack support platform with persona-based workflows for Customers, Staff, and Managers, enabling streamlined issue tracking across user roles.
- Architected a secure BFF in Go to proxy authentication requests, protecting IdP credentials and managing user sessions.
- Integrated enterprise authentication via TrueCAAS with OIDC and SAML protocols, and automated JIT user provisioning in PostgreSQL.
- Implemented custom JWT middleware in Go enforcing Role-Based Access Control (RBAC).
