Summary

Dedicated software developer with a strong passion for coding, problem-solving, and continuous learning. Eager to contribute to impactful projects, grow through hands-on experience, and develop into a skilled software engineer. Thrive in collaborative, fast-paced environments and committed to driving team and company success.

Education

The LNM Institute of Information Technology (LNMIIT)
Bachelor of Technology in Electronics and Communication Engineering (CGPA- 8.09)

Jaipur, India
08/2016- 05/2020

Skills

Programming Languages: C++, JavaScript, TypeScript, Golang, Python

Computer Science Fundamentals: DSA, Operating System, OOPS

Cloud And Development Frameworks: AWS, React.js, Echo

Experience

EagleView

SDE Intern

Bangalore, India
01/2024 – 07/2024

- Gained hands-on experience with modern front-end technologies by designing and developing a fully functional portfolio website using JavaScript, React, and Redux.
- Explored and learned state management libraries such as Zustand and Redux, as well as backend programming with Golang, strengthening understanding of full-stack development.
- Became familiar with various DevOps tools, improving knowledge of deployment pipelines, automation, and infrastructure management.
- Configured Docker and AWS environments for core microservices.
- Contributed to the Roofing feature in the existing Solar project to show selected roof facet details in a side panel and update their color based on selection.
- Added a compression interceptor for specific API endpoints in a NestJS application to improve performance and optimize payload sizes.
- Diagnosed and fixed failed unit test cases in an existing Golang project to ensure code reliability and maintainability.

EagleView

SDE-1

Bangalore, India
07/2024- Present

- Upgraded the PHP version of existing application and resolved compatibility issues resulting from the integration of the Laminas package.
- Worked on the Layer Override Styling feature for a government-focused project, enabling users to customize GIS layer styles—including color, width, opacity, and pattern—based on their preferences. The feature was implemented using React and Redux.
- Removed DB connections from legacy applications as part of an effort to reduce AWS costs. Refactored code to stop accessing imagery from the retired DB.
- Developed the User Layer feature, enabling users to create, rename, delete, and duplicate GIS layers, as well as search and sort through the available layer list.

Project

AI-Powered Unit Test Generation and Analysis Platform

- Developed a unit testing platform that utilizes multiple LLMs to automatically generate unit tests, analyze results of passed and failed test cases, and provide code coverage reports. The platform also includes a visual comparison of LLM performance to highlight the most effective model for test generation.
- Skills - React.js, Python, OpenAI API, Anthropic API.
